

CLOUD-BASED HARVEST AND PRUNING MANAGEMENT SOFTWARE FOR VINEYARDS

Streamlining vineyards around the world

Boost the productivity of your grape harvest

Having an efficient workflow is just as important as efficient tools and machinery when running a vineyard. When labour is the biggest expense, it makes sense to invest in software to manage workflows so that you can get more done in a day.

During harvest, managing many workers with different roles such as tractorists, grape pickers and harvest supervisors becomes a balancing act that needs real time visibility to give the best result. Knowing if there are grapes left on the vine, there is damage from weather events or how much each team picks allows for more efficient scheduling and ultimately lower labor costs.

Powerful harvest scheduling to boost efficiency

Leading job scheduling functionality to make the harvest more productive.

- Drag and drop scheduling
- Customized to your workflows, including details like block, row, grape type and area
- Assign each block for harvest to as many grape pickers and harvest supervisors as required.
- Automate reports on all key metrics.

Use alerts to keep harvest on target

Alot can change when working outdoors. Using alerts, like email and text, you can be notified of potential issues and reschedule grape picking as required. Ideal for supervisors managing multiple teams.

- Set reports to flag any incomplete picks or picks that run over the allocated time.
- Be alerted to areas still needing to be picked due to rain delays or if grapes are not considered to be perfectly ripe.

Real-time information for better decision making

Smarter decisions begin with real-time data and reporting.

- Automatic reallocation of jobs if weather delays the harvest
- Dashboard of grape picker utilization, job reports and other custom reports.
- Reallocate pickers that complete jobs ahead of schedule to ensure that overall job delivery targets are met.

Cloud software for always on access

Concentrate on running your business whilst we take care of keeping your data safe and giving you our latest software.

- Secure and easy access to your data from anywhere
- Fast setup – in days, rather than months
- A highly scalable solution.

Integrate with your business partner's tools

Share the information that matters with your business partner for smoother operations and less phone calls during the busy harvest weeks.

- Using the API, share data about the quantity of grapes ready to be transported to the winery and when it is ready for pick up.

Integrate with key business tools for smoother operations

Combines easily with your choice of software or use the robust API

- Fully tested and proven API. Customers report being up and running in hours.
- Integrations include Xero, MYOB, Quickbooks, Salesforce and fleet GPS software like EROAD and TomTom.

“We couldn't be happier with how vWork has worked out for us. ...when we discovered that vWork could help us manage our harvest more efficiently, without an IT department of our own, we were delighted.”

Marisco Vineyards.

vWORK IN NUMBERS

- Over 450,000 jobs scheduled each month
- 4,600+ active users
- Customers in 12 countries
